

# Week 4 Lab

This is a **pair** exercise and must be competed in your **tutorial** or **lab** with your partner.

**IMPORTANT NOTE:** Make sure you run `1511 pair` on the lab computer before starting any activities and check that your pair is correctly recorded.

During this week's lab, you'll be working on memory and loops using `while`. Don't forget to *initialise your counter*, check your *condition* makes sense, and that you *increment* at the end of the loop.

Remember: you may not use any syntax that hasn't been covered in lectures. In particular, `for` loops must not be used in submitted code and that any `for` loop can be made into a while loop.
