

# Show a letter array

This is a **pair** exercise and must be competed in your **tutorial** or **lab** with your partner.

In this activity, you will need to complete a function that displays an array of `char` values as text.

You should use the `putchar()` function for this activity. This function puts a single character on the screen.

The starting file has been given for you.

Download [showLetters.c](#), or copy it into your current directory on a CSE system by running

```
$ cp /web/cs1511/17s2/week05/files/showLetters.c .
```

Some example arrays have been provided for you.

To run some simple automated tests:

```
$ 1511 autotest showLetters
```

To run Styl-o-matic:

```
$ 1511 stylomatic showLetters.c  
Looks good!
```

You'll get advice if you need to make changes to your code.

Submit your work with the *give* command, like so:

```
$ give cs1511 wk05_showLetters
```

Or, if you are working from home, upload the relevant file(s) to the `wk05_showLetters` activity on [Give Online](#).
