Week 12 Lab

In the lab this week, we have a range of activities related to ADTs, linked lists, and recursion.

You should fill out the myExperience teaching evaluation of the course and of course staff. Your feedback is entirely anonymous, and helps to shape future offerings of the course. (This offering of the course has been heavily influenced by student feedback.)

<div align="center">

UNSW myExperience

</div>

Unfortunately, due to a slight glitch, three of the tutors were not listed on the myExperience survey for their tutorials. If your tutor is Curtis Millar, Alex Linker, or Jashank Jeremy, you'll receive a separate email with a feedback form for them.

To get started, try these warm-ups.

Warm Up	Oddly Specific Deletion
Warm Up	Multiple Good Reasons
Warm Up	A Plague of Rabbits
Warm Up	A Lengthier Recursion

The main activities this week explore working with more linked lists, a more intricate ADT, and working with recursion.

Lab	A Divisive Issue
Lab	A Different Setting
Lab	Draw Bot

… more activities to come …
